PROFILE

Business intelligence analyst combining Power BI dashboard development, SQL analytics, and Python automation to transform financial and operational data into insight for business decision-making. Currently delivering business intelligence and management information reporting for the £1B+ Hinchingsbrooke Hospital Redevelopment Programme, designing Power BI solutions with DAX measures for portfolio KPIs, risk exposure, and delivery performance, and identifying trends, patterns and improvement opportunities across workstreams. Toolkit spans Power BI, SQL, Python (Pandas, NumPy, Scikit-learn), R, and Excel, applied to data modelling, dashboarding, and replacing manual reporting with automated pipelines. Also responsible for expenditure of £1,000 to £350,000 through NHS SBS (Oracle Cloud ERP), including variance analysis and financial anomaly identification.

WORK EXPERIENCE

PMO Project Support Officer

Jan 2025 to Present

North West Anglia NHS Foundation Trust

- Designed and built a Power BI risk register dashboard for HHRP using DAX measures for risk exposure, mitigation trajectories, and workstream heatmaps, replacing static PMO reporting with an automated business intelligence layer that consolidates RAID data across workstreams and surfaces emerging risks for Board-level decision making, currently in managerial review ahead of programme rollout.
- Managed high-value expenditure of £1,000 to £350,000 through NHS SBS (Oracle Cloud ERP), conducting variance analysis against budget lines, identifying financial anomalies for Finance escalation, and producing expenditure performance reporting to support cost control.
- Produced portfolio KPI reporting and forecasting across HHRP workstreams, tracking milestones, dependencies, and critical path items, modelling delivery impact of emerging risks, and escalating variance to Programme Managers and Deputy Programme Director for early intervention.
- Analysed programme data across workstreams to identify performance trends, root causes of delivery slippage, and opportunities for targeted intervention, presenting findings to Programme Managers and the Deputy Programme Director to support evidence-based decision-making.
- Facilitated cross-functional data flow between Finance, Design and Construction, Communications, and Mobilisation teams internally, and the principal contractor externally, aligning reporting and ensuring data consistency across business functions.
- Established data governance standards including version control, data standardisation, and reporting integrity across programme documentation, Excel workbooks, SharePoint libraries, and Teams.

Workforce Information Officer

Jan 2024 to Jan 2025

North West Anglia NHS Foundation Trust

- Analysed HealthRoster operational data covering 200 to 250 staff, identifying trends in rostering, capacity, and leave patterns, and producing insight to inform workforce planning and operational service delivery.
- Designed KPI dashboards and management information reports for service leads and senior management, translating operational data into actionable recommendations that enabled evidence-based decisions in a patient-facing service environment.
- Built Python automation scripts across HealthRoster data operations, delivering 25 to 30 per cent workflow efficiency gain, improving data quality and consistency, and eliminating manual processing errors.
- Conducted root cause analysis on operational data anomalies and performance variance, working across teams to resolve data integrity issues and support continuous service improvement.

EDUCATION

University of Sheffield | BA Business Management and Economics, First Class Honours

Kendriya Vidyalaya | CBSE Class XII (Humanities), 94.6 percent overall

CERTIFICATIONS IN PROGRESS

Studying towards APM Project Management Qualification (PMQ)

TECHNICAL SKILLS

Data Analytics and Reporting. Power BI including DAX, KPI tracking and Portfolio monitoring, Business systems analysis, Python (Pandas, NumPy, Scikit-learn), R, SQL, Excel (PivotTables, VLOOKUPs, advanced formulas), APIs, PowerPoint, SharePoint, Data modelling, Dashboarding, Automation, Data Governance, Power Query, BI dashboard development, financial data analysis, customer data analysis, data extraction, database mining, dataset analysis, AI awareness.

Programme and Project Management. PMO frameworks, Programme governance, Programme Board coordination, Project controls, RAID management, Dependency and critical path tracking, Milestone tracking, Stakeholder engagement, Minute production, Action tracking, Continuous improvement.

Commercial and Financial Analysis. NHS SBS Oracle Cloud ERP, Financial analysis, cost tracking, variance analysis, financial reporting, high-value invoice management, NHS SBS procurement, expenditure tracking, KPI monitoring, budget support, financial modelling, root cause analysis, process improvement, NEC contract awareness
